

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning at page 2, line 16, by the following paragraph:

4 shows a support leg for the armchair over, for example, a base fitted with wheels which is supported on a ground surface 200. It is advisable for the support leg to have height adjustment means, such as an elastic and/or pneumatic system, as already known in the state of the art, or any other mechanical media, which in any event are outside the scope of this invention.

Please replace the paragraph beginning at page 3, line 23, by the following paragraph:

According to one form of embodiment, the seat is tilted by moving a lever 100 set on one of its sides, so that the pinions are moved in respect of the racks by means of the proper reduction.
